# Office Presence: Today, day detail, motion

For Cursor. Source: docs/design/SPEC.md sections 20 to 22.

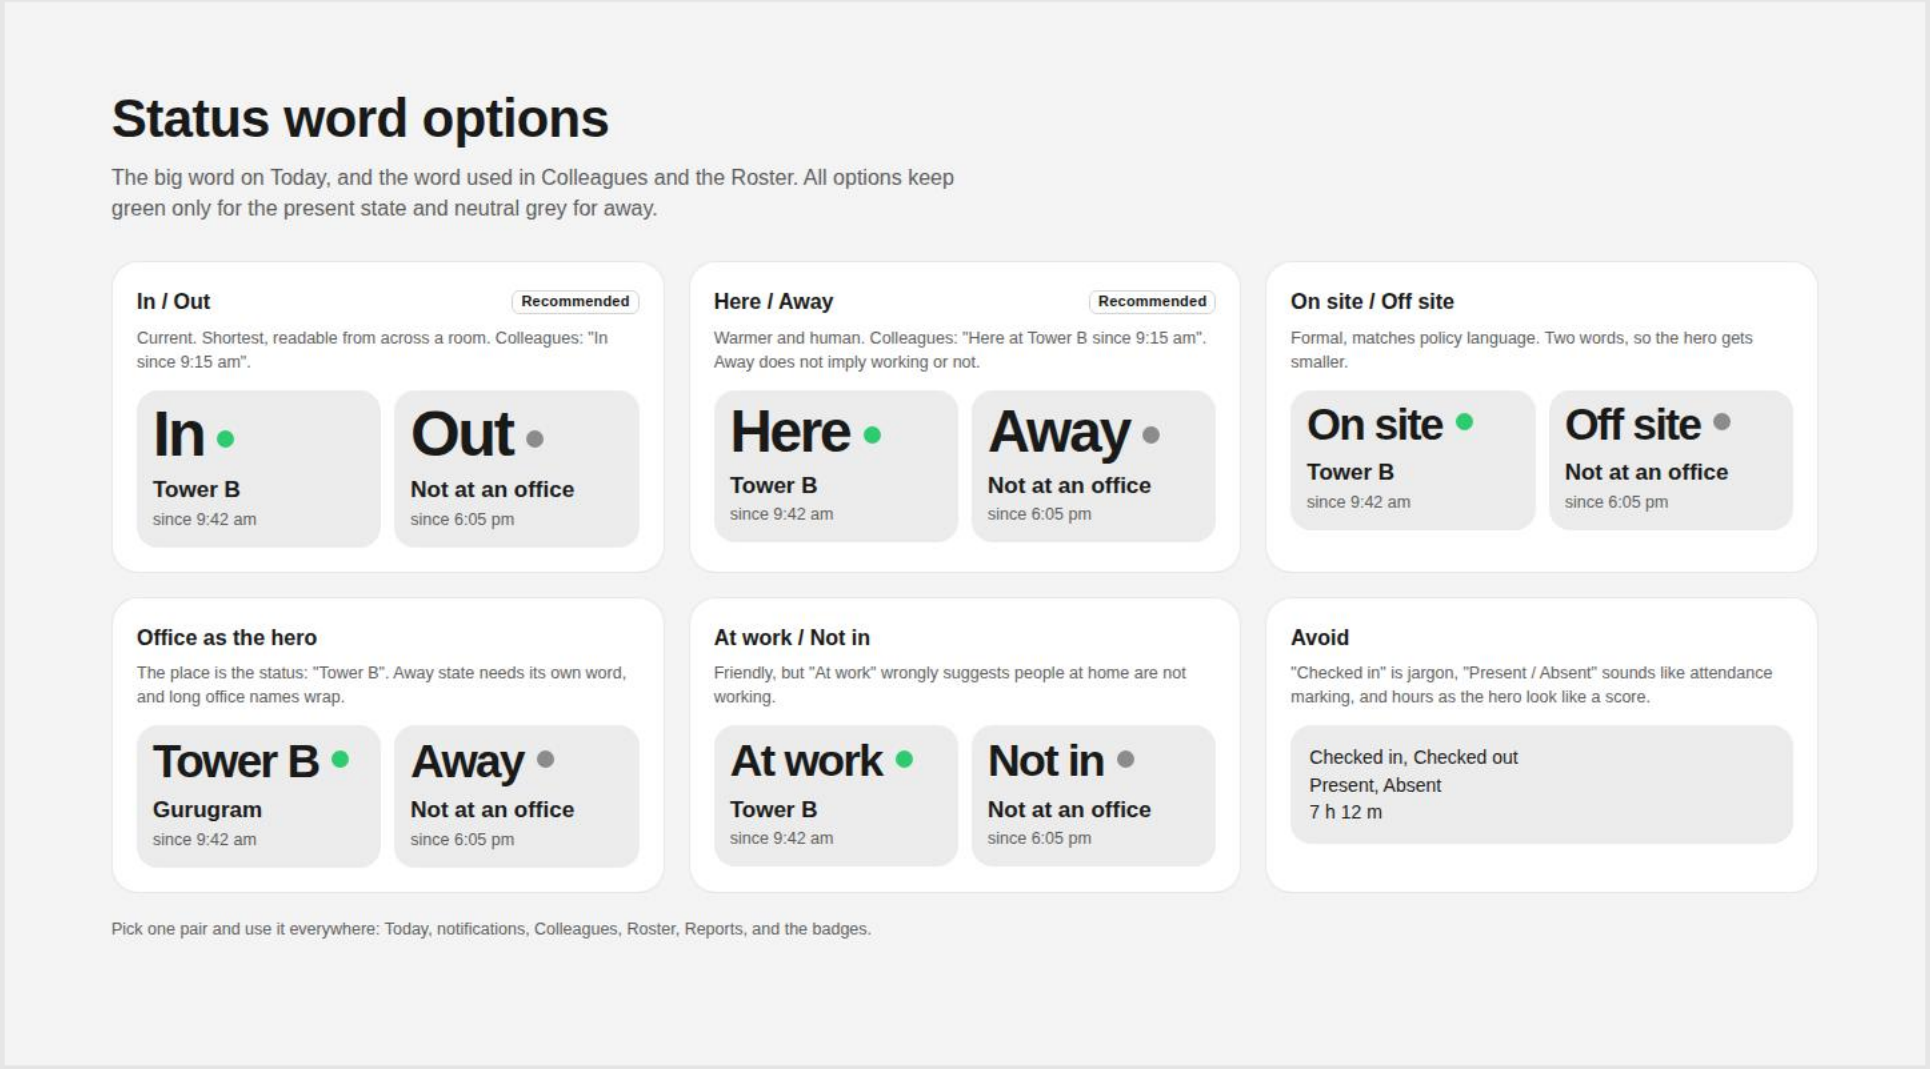

1. Points are the target. Visit days are FYI (show the FYI tag). Remove every
   'N more days at ...' hint and any days-to-go text.
2. Today shows today only: points earned today (highest office value if several),
   each visit with office, In and Out times and time, hours today FYI.
   Month progress is one line below: '5 / 8 points' bar and visit days FYI.
3. Month: tapping any visit day opens the sheet: points, visits, hours FYI,
   first In, last Out, offices, each visit with times, Request a correction.
4. Motion (docs/design/android/components/OpMotion.kt): status word rise and dot pop,
   points count up, bar spring fill, +N chip, card stagger on first open, sheet spring,
   tab indicator slide, day press, goal met once, sync spin while busy. Haptics.
   Honor reduced motion. Watch Office-Presence-motion.mp4 for timing.
5. Status word: pending a decision (see Status word options). Keep In and Out until chosen.

- P / Month / In progress
- P / Month / Day detail
- P / Month / Day with several offices
- W / Month

# Status word options

Choose one pair; it replaces In and Out everywhere.

# Motion

Open the HTML to see these play. Each plays once; Replay on each card.

## Motion

Motion explains what changed: your status, your points, where a sheet came from. Each plays once, then stops. Press Replay on any card. With reduced motion turned on, everything becomes a simple fade.

### Status changes to In

In.

Word rises 8 px and fades in, 320 ms. Dot pops to 1.25 then settles, one green halo. Light haptic.

Replay

### Points earned

5 / 8 points +4

Number counts up over 600 ms, bar fills with a small overshoot, a "+4" chip rises and fades. Plays when a new visit day counts.

Replay

### Screen opens

Cards fade up 10 px, 60 ms apart, 420 ms each. Only on first open of a tab, not on every return.

Replay

### Day detail sheet

Scrim fades 250 ms. Sheet springs up (damping 0.8). Drag down to close, follows the finger.

Replay

### Goal met

8 / 8 points Goal met

Badge scales in once, one light sweep across the bar, success haptic. Shown the first time only, not every open.

Replay

### Tap a day

13 14 15

Press scales to 0.9 and back, 300 ms, then the selected ring grows. The sheet follows.

Replay

### Switch tabs

Today Month Year

Indicator pill slides to the new tab, 300 ms. Content cross-fades with an 8 px shift.

Replay

### Sync

Sync

Icon turns while the request is open (functional, stops when done). Then "Up to date" pops in. Light haptic.

Replay

## Tokens

| Token | Value | Use |
|---|---|---|
| motion.fast | 150 ms, standard easing | Presses, toggles, chips |
| motion.base | 300 ms, emphasized decelerate | Status word, tab indicator, cross-fades |
| motion.slow | 420 to 600 ms | Card entrance, count up |
| motion.spring | damping 0.8, stiffness medium | Sheets, bar fill, dot pop |
| stagger | 40 to 60 ms per item, max 5 items | First open of a tab |

No loops except a spinner while a request is open. Never animate hours. Honor reduced motion and the Android animator scale.

# Points and days

Target in points, office value in points per visit day, days needed shown as a hint.

# Points and days

The target is 8 points a month. Each office gives points per visit day, so the number of days needed depends on where you go. Points are the target. Visit days are shown as information only.

| Office | Points per visit day | Days for 8 points |
|---|---|---|
| **Gurugram, Tower B** | 4 | 2 |
| **Gurugram, Cyber City** | 4 | 2 |
| **Pune, Kharadi** | 4 | 2 |
| **Kolkata, Plot Y14** | 1 | 8 |
| **Bengaluru, Prestige** | 1 | 8 |

**5** / 8 points — **3 to go**

2 visit days FYI

1 Kolkata day (1 point) and 1 Gurugram day (4 points).

**1** / 8 points — **7 to go**

1 visit day FYI

1 Kolkata day so far.

**9** / 8 points — ✓ **Goal met**

1 point over the target.

2 Gurugram days and 1 Kolkata day.

## Rules

The meter, roster, reports and Year count points. Visit days are shown next to them with an FYI tag. Days are never a target.

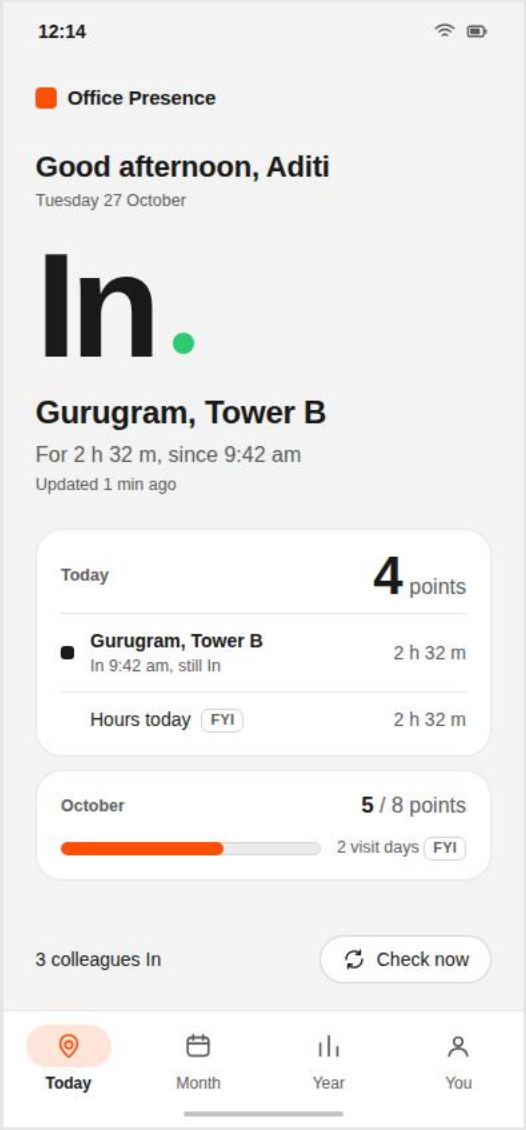

"To go" is in points only. Do not tell people how many days or which offices they still need; they know the office values.

A day counts once. If a day has visits at several offices, it gets the highest office value that day.

Calendar cells show the day's points. Admins set points per visit day per office in Offices; the target is in Rules.

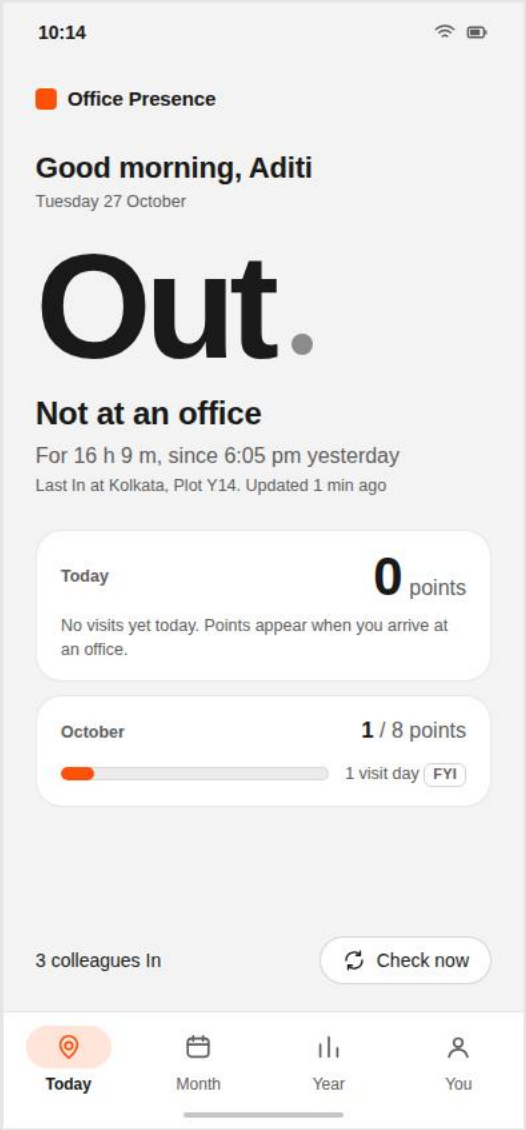

# P / Today / In

Today is about today: points earned today from the office or offices visited, each visit with In and Out times, hours FYI. Month progress sits below as one line. Greeting uses preferred name, else first name. "For 2 h 32 m" is time since the last change, not hours today. Hours today sits in the FYI row.

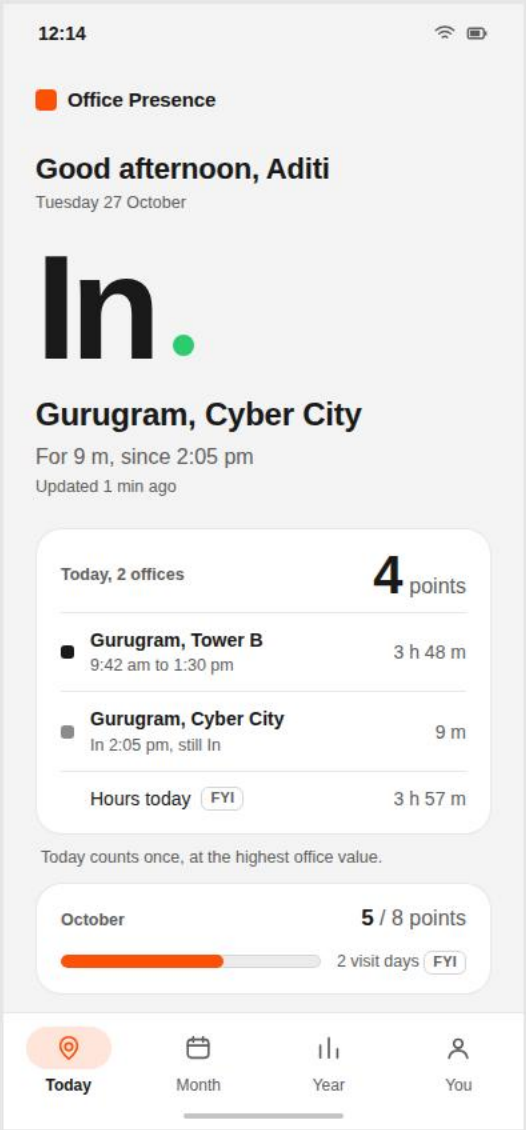

# P / Today / Out

Out uses the neutral dot. Never red, never an alert.

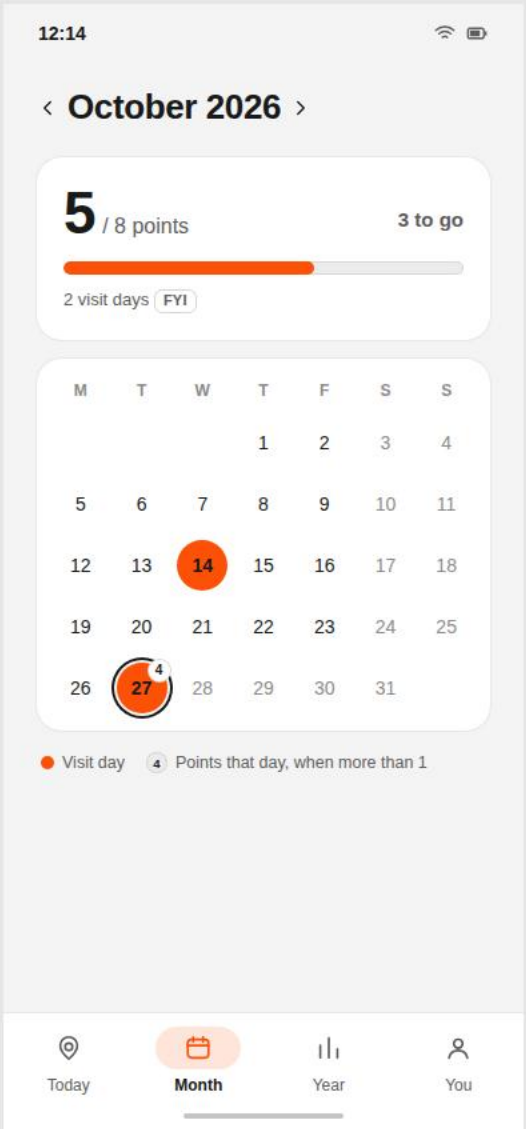

# P / Today / In, second office

After moving offices the hero shows the current office and time since arriving there. Today card lists each office with its time.

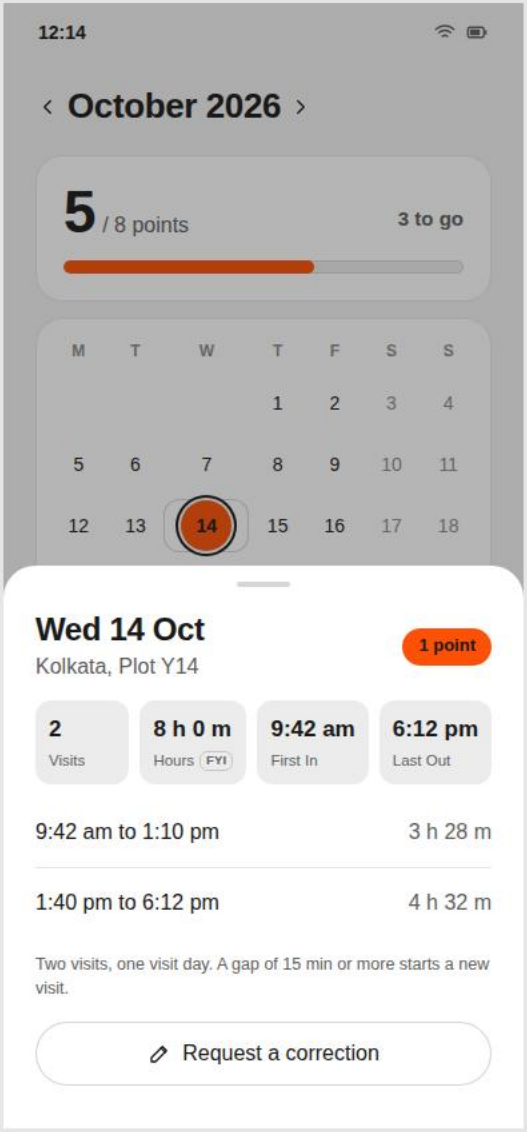

# P / Month / In progress

A small number marks the points for that day when it is more than 1. Tap a day to open the sheet.

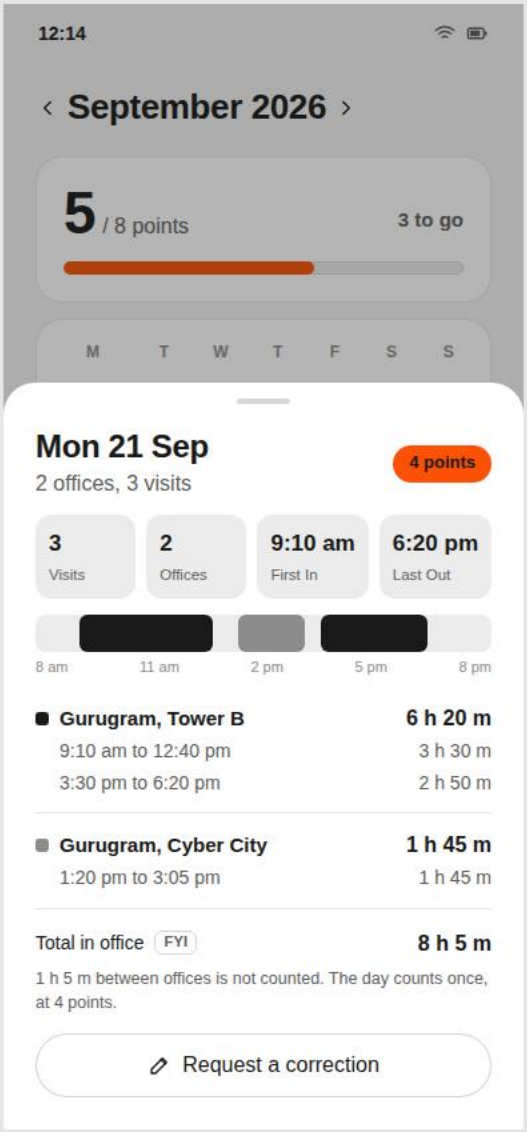

# P / Month / Day detail

Bottom sheet over Month. Hours are reference only.

# P / Month / Day with several offices

Group visits by office in arrival order. Office time is the sum of its visits; total excludes travel. A day counts once. With several offices, it counts at the highest office value (confirm with backend).

# W / Month

Left column mirrors phone Today. Calendar cells show points per day, not hours.
