Office Presence: Year tab and data refresh

For Cursor. Source: docs/design/SPEC.md section 18.

1. Bottom bar: employees get Today, Month, Year, You. Admins get Today, Month, Year, Colleagues, You. Web rail: My month, My year, Settings; Colleagues only for admins. Server must also reject colleague endpoints for non-admins.
2. Year screen: days counted, visit days, months met, target so far, to go this month; bars per month with the 8 day line (current month striped, green dot only for met); weekday heatmap; offices; weekdays; usual arrival, leaving, average hours (all FYI); corrections and admin edits. Tapping a month opens Month for that month.
3. Cache first: show cached data with 'Updated N ago'. Refresh on open if older than 24 h, plus one daily WorkManager job. Sync button sends cached month versions and gets only changed months (or 304). After a sync, Sync is disabled for 5 min.
4. A push for a correction decision or an admin edit marks that month changed. No polling.
5. Offline and error keep the cache visible with its time. Retries use backoff.
6. GET /api/me/year?year=2026 with known month versions; about 3 KB.

- M / My year

Flow / Data refresh rules

Cache first, refresh once a day, manual Sync with cooldown.

Data refresh rules

Screens read from a local cache and only ask the server when something can have changed. This keeps Year, Month and Colleagues cheap on Vercel and keeps every screen honest about how fresh it is.

Open a screen

Show the cache at once

Always with "Updated N ago". Never a blank screen if cached data exists.

Older than 24 h?

Refresh by itself

One request on open, plus a daily WorkManager job (any network, battery not low, with backoff).

Person taps Sync

One delta request

Send the version of each cached month. The server returns only months that changed, or 304.

After Sync

5 min cooldown

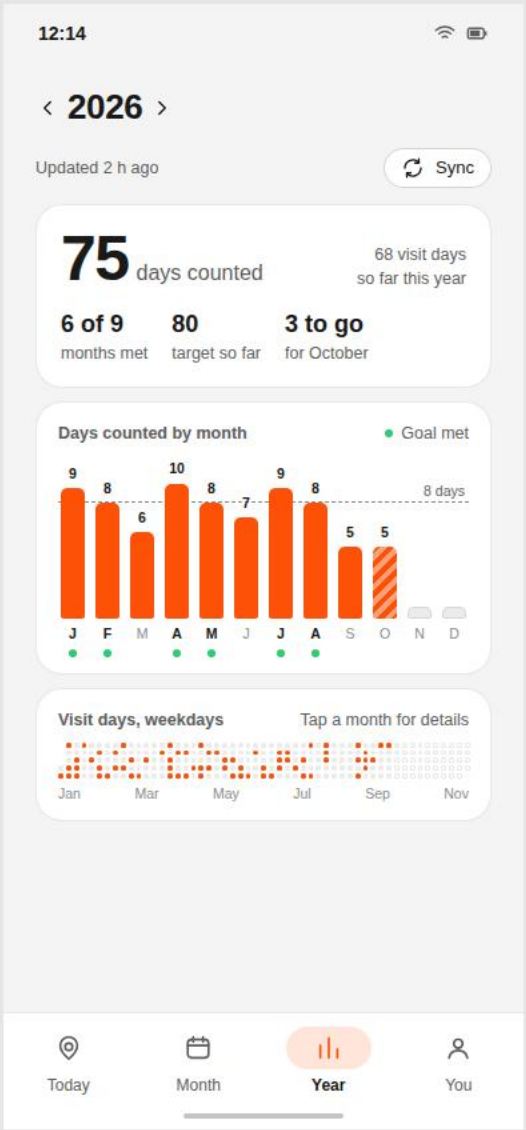

Button shows "Synced". A second tap inside 5 min does nothing and costs nothing.

Rules

- Past months are kept until the server version changes (a correction or an admin edit). The current month is refreshed when stale.
- A push for "correction approved" or "day edited by admin" marks that month as changed, so the next open fetches it. No polling.
- Today's In or Out comes from on-phone tracking, not from this refresh. Location sync and its offline queue are separate and unchanged.
- Year is one endpoint for the whole year (about 3 KB). Opening Year many times a day costs at most one request a day plus manual syncs.
- Offline or error: keep showing the cache with the time it was saved, and say so in plain words. Never show a stale number without its time.
- Colleagues (admins only) follows the same rule with a 15 min freshness window instead of 24 h, and refreshes on pull.

P / Year

Year tab for everyone. Bars are days counted per month with the 8 day line; striped bar is the month in progress; green dot only for months met.

P / Year / Details

Scrolled part of Year. Hours and times are FYI. Tapping a month or heatmap cell opens Month for that month.

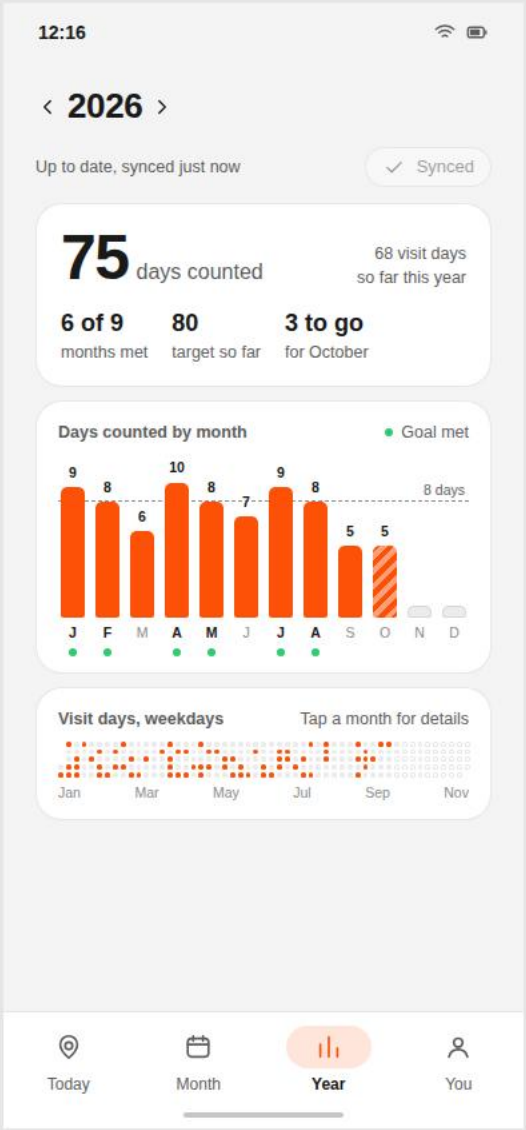

P / Year / Syncing

One delta request with cached month versions.

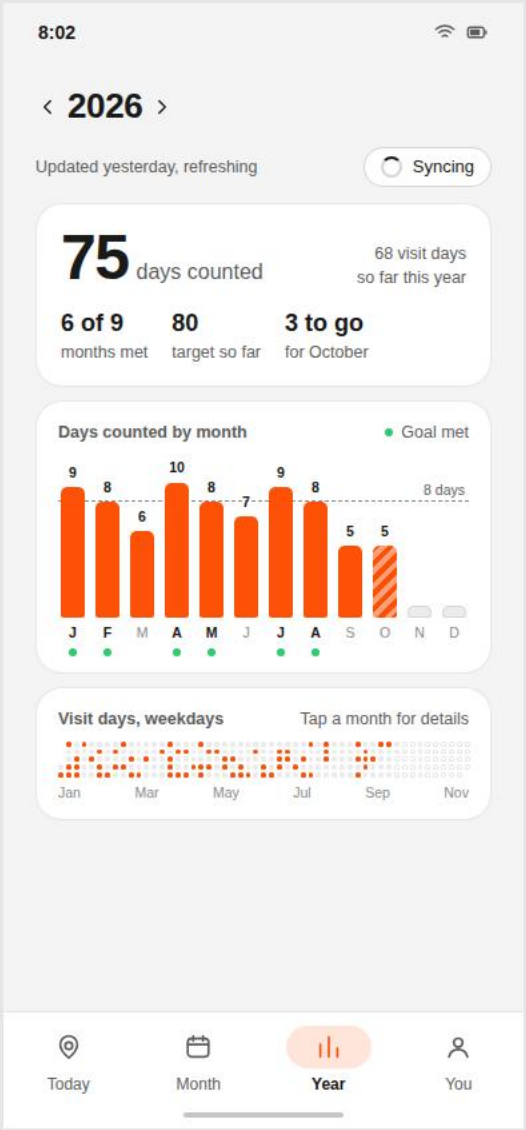

P / Year / Synced

Sync disabled for 5 min after a successful sync.

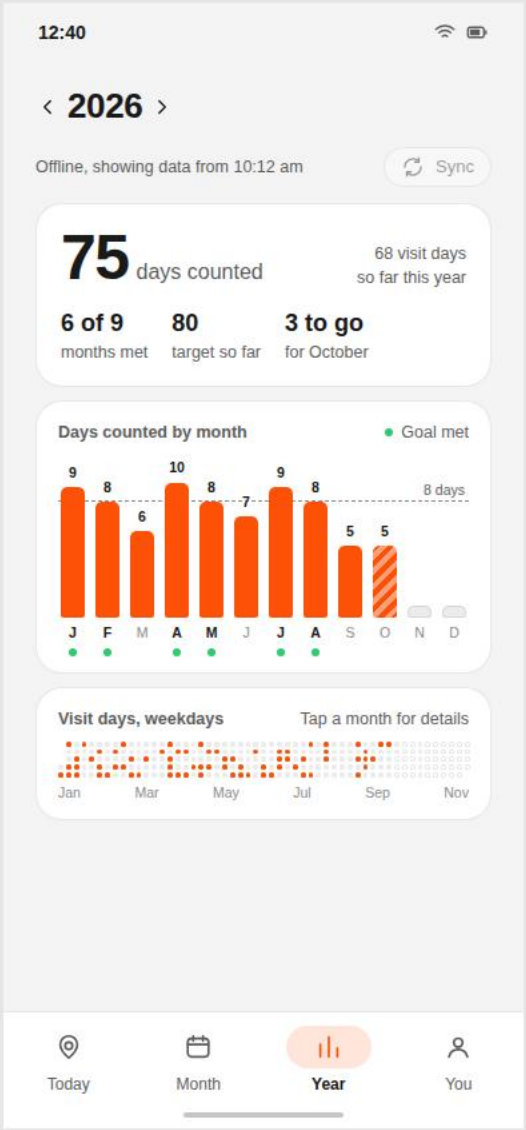

P / Year / Auto refresh

Opened with data older than 24 h: refreshes by itself, cached data stays visible.

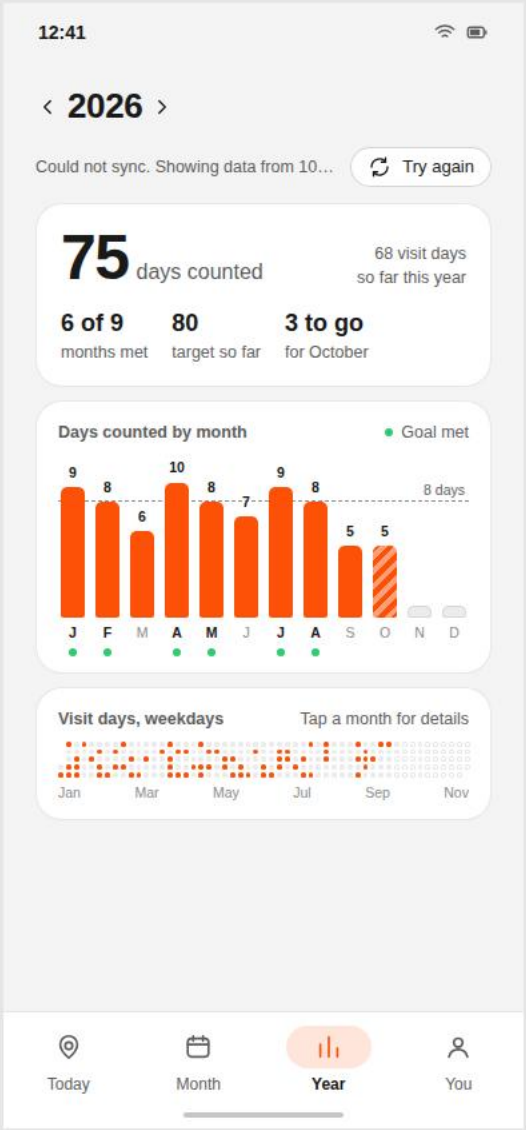

P / Year / Offline

Sync disabled while offline; shows when the data was saved.

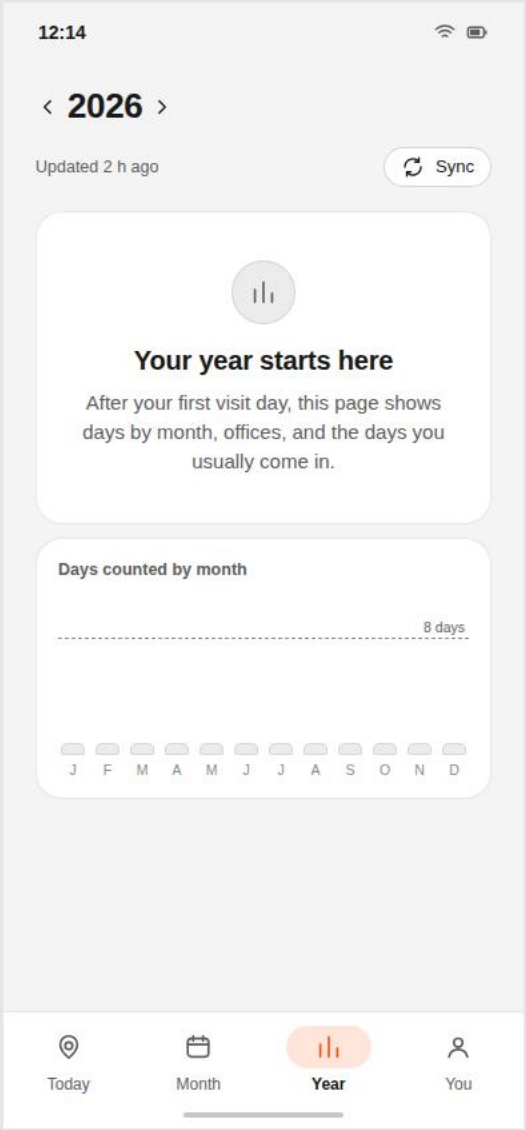

P / Year / Sync failed

Try again uses exponential backoff for automatic retries.

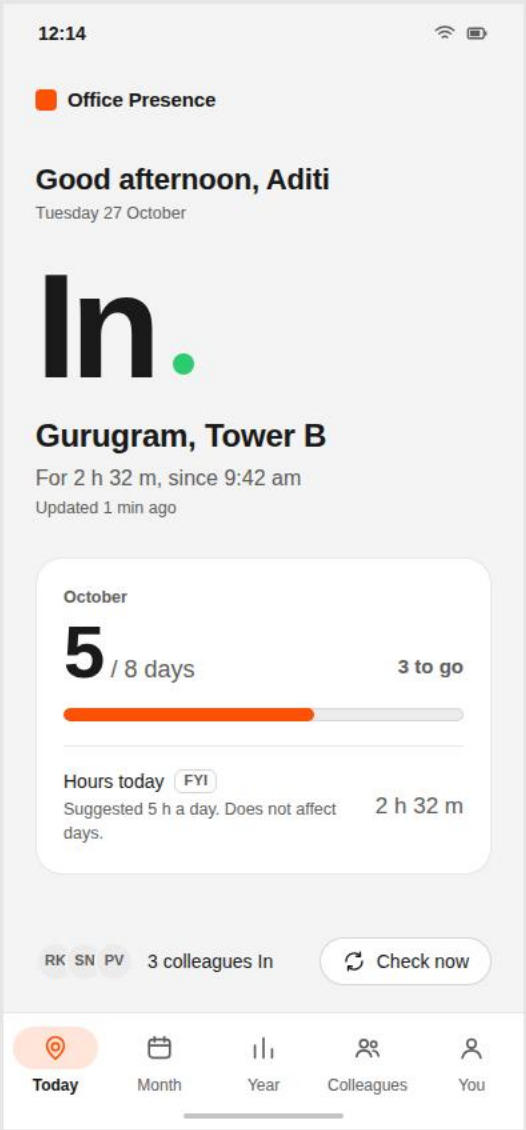

P / Year / Empty

New user before the first visit day.

P / Today / In, admin navigation

Admins get five tabs: Today, Month, Year, Colleagues, You. Employees get four, without Colleagues.

W / My year

Rail for employees: My month, My year, Settings. Colleagues appears only for admins.
